                                                              -:- CATALYTIC ACTIVITY: Thiosulfate + cyanide = sulfite + thiocyanate.
-:- SUBUNIT: Monomer.
-:- SUBCELLULAR LOCATION: Mitochondrial matrix.
-:- TISSUE SPECIFICITY: FOUND IN NUMEROUS TISSUES.
-:- DOMAIN: THE STRUCTURE CONSISTS OF 2 DOMAINS OF VERY SIMILAR CONFORMATION, SUGGESTING A COMMON EVOLUTIONARY ORIGIN. HOWEVER, THE SEQUENCES OF THE 2 DOMAINS ARE VERY DIFFERENT.
-:- SIMILARITY: Contains 2 rhodanese domains.

                                                                                                                                           J. Biol. Chem. 270:16230-16235(1995).
-!- FUNCTION: TRANSFERS A SULFUR ION TO CYANIDE OR TO OTHER THIOL COMPOUNDS. ALSO HAS WEAK RHODANESE ACTIVITY. MAY HAVE A ROLE IN CYANIDE DECRADATION OR IN THIOSULFATE BIOSYNTHESIS.
-!- CATALYTIC ACTIVITY: 3-mercaptopyruvate + cyanide = pyruvate +
                                                                                                                                                                                                                                                                                     -i- SUBUNIT: MONOMER OR DISULFIDE-LINKED HOMODIMER.
-i- SUBCELLULAR LOCATION: CYTOPLASMIC (MOSTLY) AND MITOCHONDRIAL.
-i- DOMAIN: THE STRUCTURE CONSISTS OF 2 DOMAINS OF VERY SIMILAR
CONFORMATION, SUGGESTING A COMMON EVOLUTIONARY ORIGIN. HOMEVER,
THE SEQUENCES OF THE 2 DOMAINS ARE VERY DIFFERENT.
-i- PTM: THE N-TERMINAL IS BLOCKED.
-i- SIMILARITY: Contains 2 rhodanese domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            INCREASED RHODANESE ACTIVIY.

-!- FUNCTION: FORWATION OF IRON-SULFUR COMPLEXES AND CYANIDE DETOXIFICATION. BINDS MOLECULAR OXYGEN AND SULFUR.
-!- CATALYTIC ACTIVITY: Thiosulfate + cyanide = sulfite + thiocyanate.
-!- SUBUNIT: MONOMER.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MEDLINE-19007483; PubMed-691057;

C -1 FUNCTION: FORMATION OF IRON-STILFUR COMPLEXES AND CYANIDE DETOXIFICATION. BINDS MOLECULAR OXYGEN AND SULFUR.

C -1 CATALYTIC ACTIVITY: Thiosulfate + cyanide = sulfite + thiocyanate.

C -1 SUBCELULAR LOCATION: Mitochondrial matrix.

C -1 SUBCELULAR LOCATION: Mitochondrial matrix.

C -1 SUBCELULAR LOCATION: Mitochondrial matrix.

C -1 SUBLINIT: MORDOMER CONSISTS OF 2 DOMAINS OF UNIGIN. HOWEVER,

THE SEQUENCES OF THE 2 DOMAINS ARE VERY DIFFERENT.

THE SEQUENCES OF THE 2 DOMAINS ARE VERY DIFFERENT.

Patent No. 6444425

GENERAL INPORMATION:
APPLICANT: Reed, Steven G.
APPLICANT: Lodes, Michael J.
APPLICANT: Mohamath, Roadoh
APPLICANT: Secrist, Heather
TITLE OF INVENTION: COMPOUNDS FOR THERAPY AND DIAGNOSIS OF
TITLE OF INVENTION: LUNG CANCER AND METHODS FOR THEIR USE
FILE REPERENCE: 210121-475C1
CURRENT APPLICATION NUMBER: US/09/370,838
CURRENT FILING DATE: 1999-08-09
EARLIER FILING DATE: 1999-04-02
NUMBER OF SEQ ID NOS: 289
NUMBER OF SEQ ID NOS: 289
SOSTWARE: FRASEDE FOR WINDOWS VERSION 3.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Score 29; DB 4; Length 136;

Sequence 17616, Application US/09252991A

Sequence 17616, Application US/09252991A

Patent No. 6551798

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: ARGUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: ASRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: ASRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US 60/074,788

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

LENGTH: 834
                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 18225, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

GENERAL INFORMATION:

APPLICATION BOTH TO US/09328352

GENERAL INFORMATION:

APPLICAN: GARY L. Breton et al.

ITILE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER

ITILE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION VUBBER: US/09/328,352

CURRENT APPLICATION VUBBER: US/09/328,352

CURRENT FILING DATE: 1999-06-04

NUMBER OF SEQ ID NOS: 8252
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

01-OCT-2000 (TrEMBLrel. 15, Last annotation update)
Hypotherical 52.0 kDa protein (ORF32).
Macaca mulatta rhadinovirus 17577, and
Macaca mulatta rhadinovirus 26-95.
Viruses; GBDNA viruses, no RNA stage; Herpesviridae;
Gammaherpesvirinae; Rhadinovirus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               464 AA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           also as an homodimer. Directly interacts with IKK-GAMMA/NEWO.

Heterotdimers form the active complex. The tripartite complex can also bind to MAPSIA/NIK, MEKKI, IKAP and IKB-1Pha-P65-P50 complex. A weak interaction with TRAF2 cannot be excluded. Part of a complex composed of NCOA2, NCOA3, IKKB, IKBKG and CREBBP.

-!-SUBCELLULAR LOCATION: Cytoplasmic.
-!-TISSUB SPECIFICITY: Widely expressed.
-!-PIM: Phosphorylated by MAPSK14/NIK, AKT and to a lesser extent by MEKKI, and dephosphorylated by PP2A. Autophosphorylated.
-!-SIMILARITY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES.
                                                                                                               MEDLINE=21968797; PubMed=11971985; WCDA2; NCDA3; IKKB AND IKBKG. MEDLINE=21968797; PubMed=11971985; Wu R.C., Qin J., Hashimoto Y., Wong J., Xu J., Tsai S.Y., Tsai M.J., Malley B.W.; Regulation of SRC-3 (pCIP/ACTR/AIB-1/RAC-3/TRAM-1) coactivator activity by I kappa B kinase."; Mol. Cell. Biol. 22:3549-3561(2002).

-!- FUNCTION: Phosphorylates inhibitors of NP-kappa-B thus leading to the dissociation of the inhibitor/NP-kappa-B complex and ultimately the degradation of the inhibitor. Also phosphorylates
                                                                                                                                                                                                                                                                                                                                                                                                                                                            ENZYME REGULATION: Activated when phosphorylated and inactivated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         when dephosphorylated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ATP (BY SIMILARITY).

TISSUE SPECIFICITY: Ubiquitous only for isoform 1, isoforms 2 as are expressed predominantly in brain and T-lymphocytes.
DEVELOPMENTAL STAGE: Maximally expressed at E7 day followed by B11, B15 and B17 days. In the limb development, its expression predominates in the limb buds at E12.5 day.
                                                                                                                                                                                                                                                                                                                                                                                                                                            "Differential regulation of IkappaB kinase alpha and beta by two upstream kinases, NF-kappaB-inducing kinase and mitogen-activated protein kinase/ERK kinase kinase-1.";

Mol. Cell. Biol. 22:3549-3561(2002).

Mol. Cell. Biol. 22:3549-3561(2002).

-I-FUNCTION: Phosphorylates inhibitors of NF-kappa-B thus leading to the dissociation of the inhibitor/NF-kappa-B complex and ultimately the degradation of the inhibitor. Also phosphorylates NCOA3 (By similarity).

-I-SUBUNIT: Preferentially found as a heterodimer with IKK-alpha but also as a homodimer. Directly interacts with IKK-gamma/NEMO. Heterodimers form the active complex. The tripartic complex can also bind to MEKKI, MAPSHL4/NIK, IKAP and IKB-alpha-P65-P50 complex. Phosphorylated IKB-alpha is further released from the complex. Found in a complex composed of NCOA2, NCOA3, IKKA, IKBKG
IDENTIFICATION IN A COMPLEX WITH CREBBP; NCOA2; NCOA3; IKKA AND IKBKG.
                                                                                                                                                                                                                                                                                                                     SUBCELLULAR LOCATION: Cytoplasmic.
TISSUE SPECIFICITY: Highly expressed in heart, placenta, skeletal

                                                                                                                                                                                                                                                                                                                                                              muscle, kidney, pancreas, spleen, thymus, prostate, testis and
                                                                                                                                                                                                                                                                                                                                                                              peripheral blood.
PTM: Phosphorylated by MEKK1 and probably also by MAP3K14/NIK.
                                                                                                                                                                                                                                                                                                                                                                                                            Weakly autophosphorylated.
SIMILARITY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES.
IKAPPAB KINASE SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MIM, 602258; —.

                                        -I- SUBCELLULAR LOCATION: Cytoplasmic.
-I- SUBCELLULAR LOCATION: Cytoplasmic.
-I- TISSUE SPECIFICITY: Expressed in liver, kidney and spleen.
-I- DEVELOPMENTAL STAGE: While it is expressed ubiquitously throughout the mouse embryo, at E9.5 day its expression begins to be localized to the brain, neural ganglia, neural tube, and in liver at E12.5 day. At E15.5 day, the expression is further restricted to specific tissues of the embryo.
-I- TPM: Phosphorylated by MEKKI and probably also by MAP3KI4/NIK.
-- Weakly autophosphorylated.
-- SIMILARITY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES.
          complex. Phosphorylated IKB-alpha is further released from the complex. Found in a complex composed of NCOA2, NCOA3, IKKA, IKBKG and CREBBP (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

"Coordinate regulation of IkappaB kinases by mitogen-activated protein kinase kinase a 1 and MP-kappaB-inducing kinase.";
MOI. Cell. Biol. 18:7336-7343(1998).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SUBUNIT: Preferentially found as a heterodimer with IKK-alpha but also as a homodimer. Directly interacts with IKK-gamma/NEWO.

Also as a homodimer. Directly interacts with IKK-gamma/NEWO.

Also bind to MEKKI, MAPSKI4/NIK, IKAP and IKB-alpha-P65-P50

complex. Phosphorylated IKB-alpha is further released from the complex. Found in a complex composed of NCOA2, NCOA3, IKKA, IKBKG and CREBBP (By similarity).

PTM: Phosphorylated by MEKKI and probably also by. MAP3KI4/NIK.

Weakly autophosphorylated.

SIMILARITY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES.

IKAAPAB KINASE SUBFAMILY.
28-FEB-2003 (Rel. 41, Last annotation update)
Inhibitor of nuclear factor Kappa B kinase beta subunit (EC 2.7.1.-)
(T-kappa-B-kinase beta) (IKK-beta) (IKK-B) (I-kappa-B kinase)
(Nuclear factor NF-kappa-B inhibitor kinase beta) (NFKBIKB)
                                                                                                                                               Rattus norvegicus (Rat).

I. Mol. Biol. 166:11-19(1981).

I. FUNCTION: THE MAND S SUBUNITS TOGETHER FORM A METHYLTRANSFERASE (MTASE) THAT METHYLATES TWO ADENINE RESIDUES IN COMPLEMENTARY STRANDS OF BIPARTITE DNA RECOGNITION SEQUENCE. IN THE PRESENCE OF THE RANDONUCLEASE, BINDING TO THE SAME TARGET SEQUENCE. WHEN THE DNA SOME DISTANCE FROM THIS SITE, WHETHER THE DNA IS CUT OR MODIFIED DEPENDS ON THE METHYLATION STATE OF THE TARGET SEQUENCE. WHEN THE TARGET SITE IS UNMODIFIED, THE DNA IS CUT OR MODIFIED DEPENDS ON THE HEMIMETHYLATED, THE COMPLEX ACTS AS A MAINTENANCE WTASE MODIFYING THE DNA SO THAT BOTH STRANDS BECOME METHYLATED. SUBUNIT S DICTATES ON THE BOAD SECONE METHYLATED. SUBUNIT S DICTATES TARKIN) GGCY-3.

Sampling the genomic pool of protein tyrosine kinase genes using the polymerase chain reaction with genomic DNA.";
Biochem. Biophys. Res. Commun. 249:660-667(1998).
-!- FUNCTION: Tyrosine-protein kinase receptor that functions during early stages of neuronal development.
-!- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              -! - SIMILARITY: BELONGS TO THE TYR FAMILY OF PROTEIN KINASES. A; Description: The sequence of C. elegans cosmid B0252.
A; Reference number: S55415
A; Reference number: S55415
A; Reference number: S55415
A; Accession: T15295
A; Status: preliminary; translated from GB/EMBL/DDBJ
A; Molecule type: DNA
A; Molecule type: DNA
A; Residues: 1-204 < DUZ>
A; Cross-references: EMBL: U23453; NID: 9733572; PID: 9733579; PIDN: AAC46760.1; CESP: B0252.6
A; Experimental source: strain Bristol N2

Sequence 4, Application US/09099125A

Patent No. 5916760

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Woronicz, John

TITLE OF INVENTION: IKK- Proteins, Nucleic Acids and Methods

NUMBER OF SEQUENCES: 4

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Length 745;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 10, Application US/08910820
Patent No. 6258579
GENERAL INFORMATION:
APPLICANT: Mercurio, Frank
APPLICANT: Barbosa, Miguel
APPLICANT: Liu, Hengyi
APPLICANT: Li, Gian
APPLICANT: Li, Gian
APPLICANT: STIMULUS-INDUCIBLE PROTEIN KINASE
TITLE OF INVENTION: COMPLEX AND METHODS OF USE THEREFOR
         Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          COMPUTER REALABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARRE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/910,820
FILING DATE: 12-AUG-1997
         0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                6300 Columbia Center, 701 Fifth Avenue
